

Howdy, I'm

Brian Travers

Chicago-based full-stack developer, former graphic designer, and agency veteran with 10+ years of experience building websites and all things digital.

Skills

- I build big websites and small landing pages alike with a purposeful mix of hand-written and AI-generated code.
- Paramount to my process is creating accessible, well-documented and maintainable code.
- I have a historical knowledge and updated expertise in programming HTML email and display ad development.
- My most valuable skill is my curiosity and passion for problem solving, adding value beyond the 'dev team'. Over the past few years, I've worked on data visualization, dashboards, 360-degree virtual tours, Snapchat games, Facebook video ads, broadcast commercials, in-stadium jumbotron video, custom MIDI audio tracks, website analytics reports among many others.
The foundation of my skills are below:
